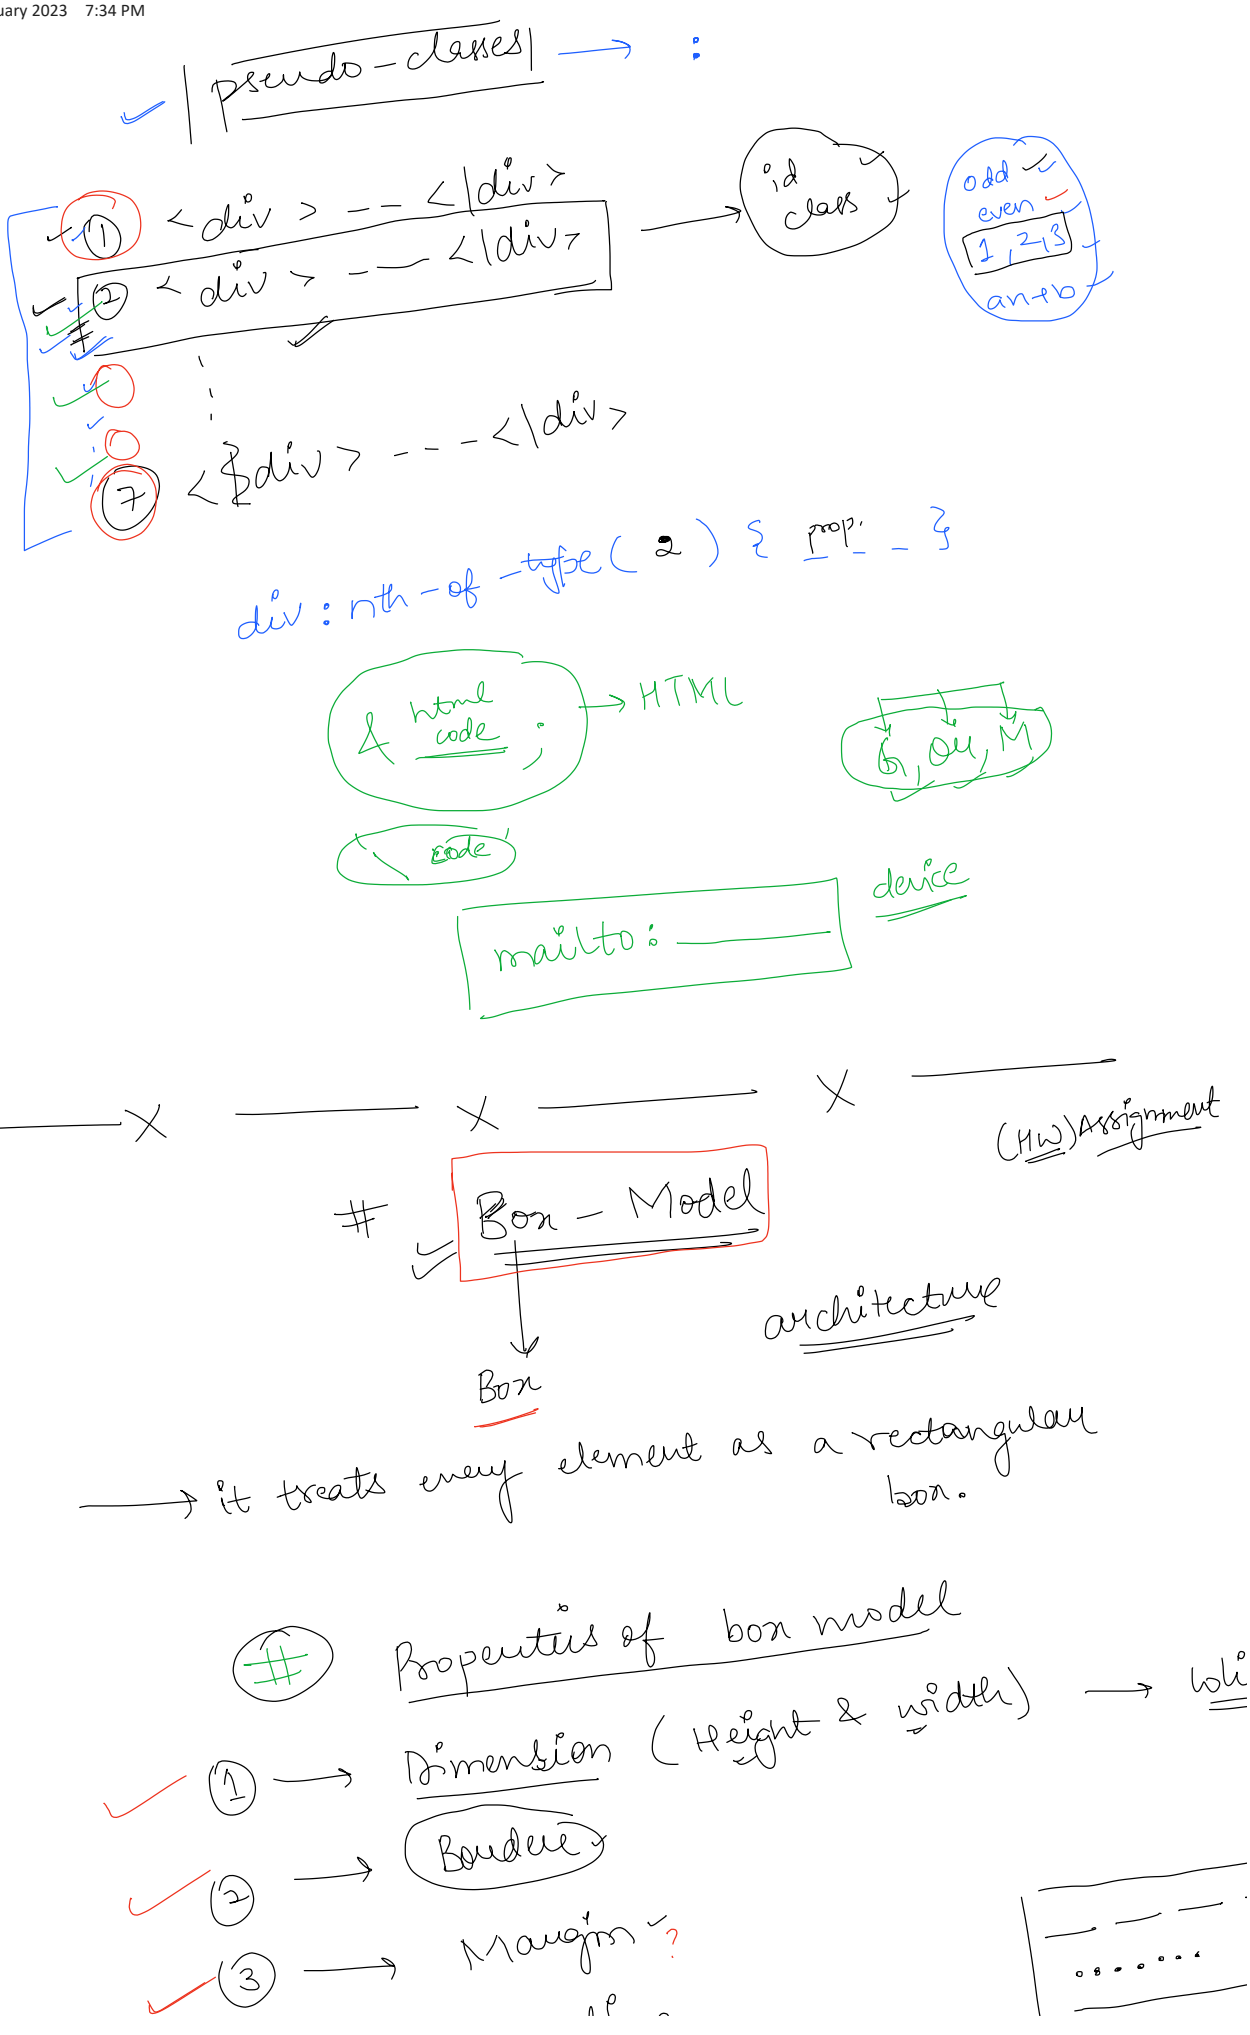
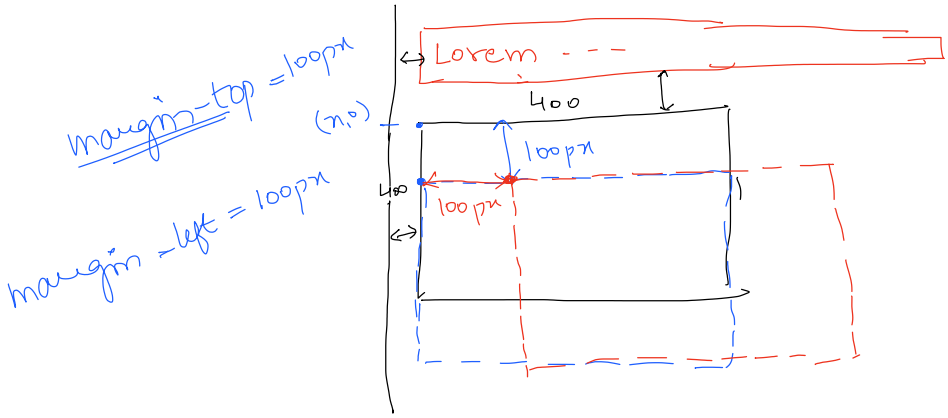
Day8(box-model,css units, display)

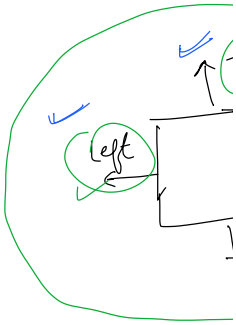
Monday, 13 February 2023 7:34 PM



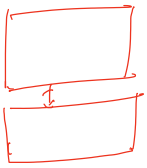
(4) → padding

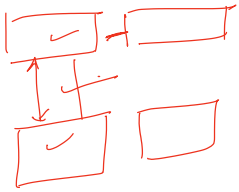


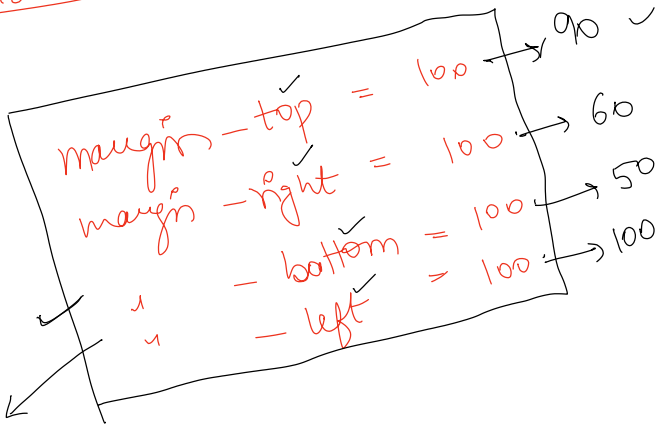
margin

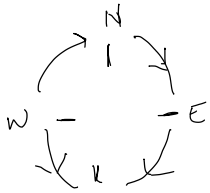


margin → it is a space b/w 2 elements









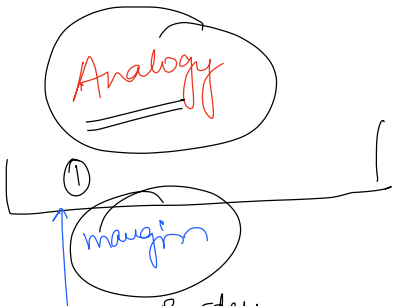
Shorthand

margin = 100px

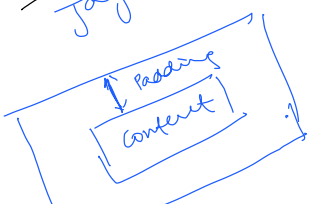
	top	Right	bottom	Left
margin =	90px	60px	50px	100px

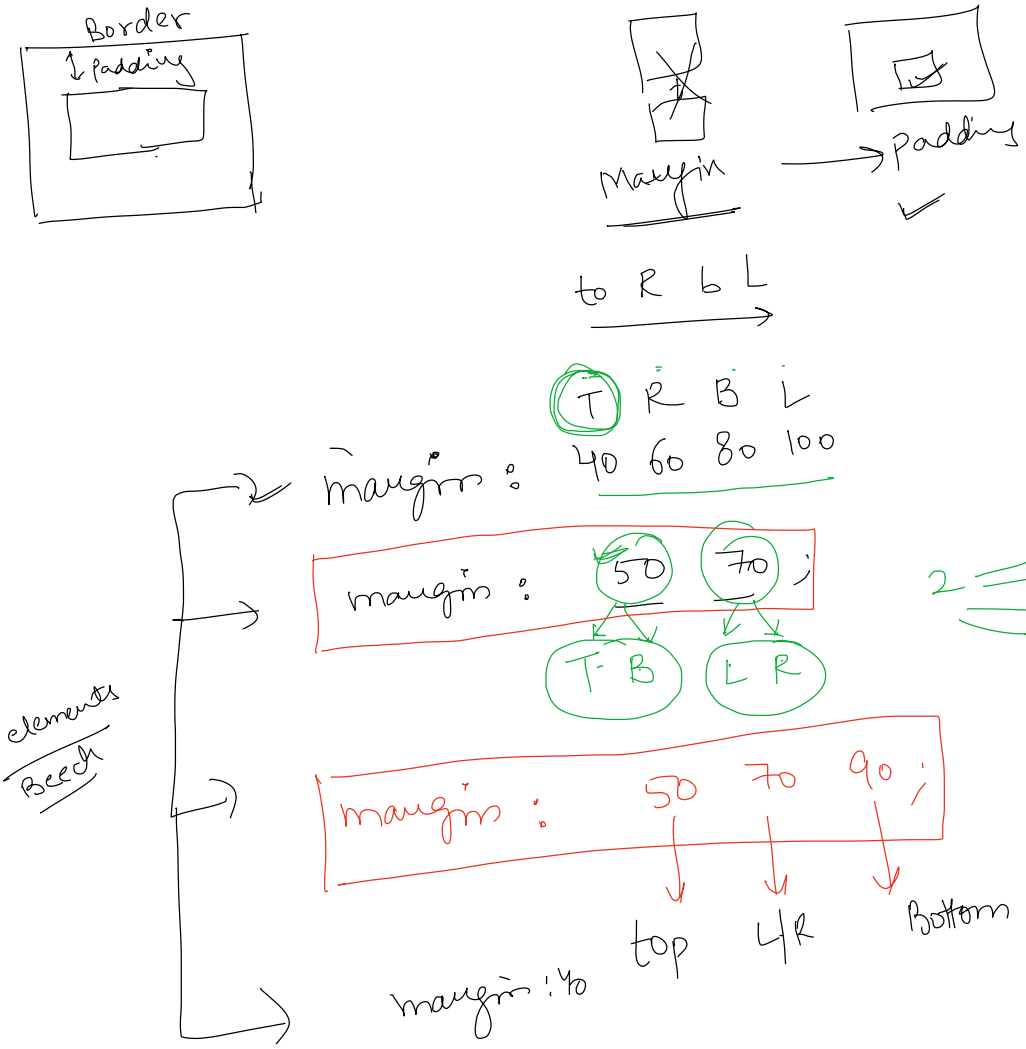
Padding:

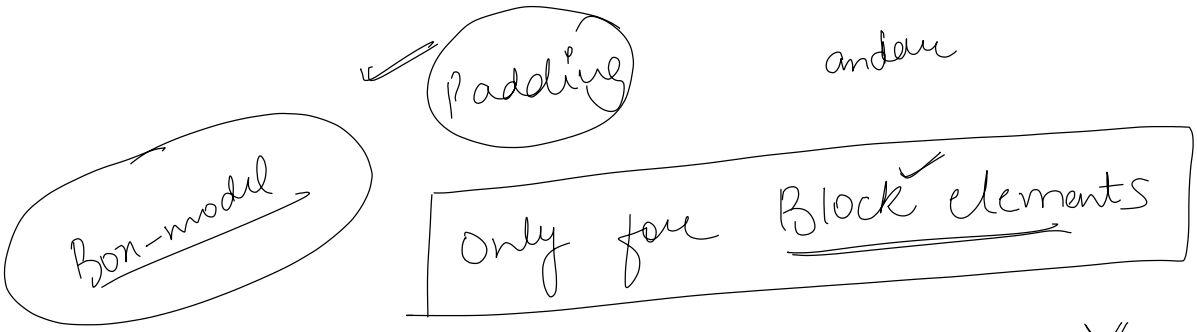
Analogy



ek cell/element ke andaru ki jagah.

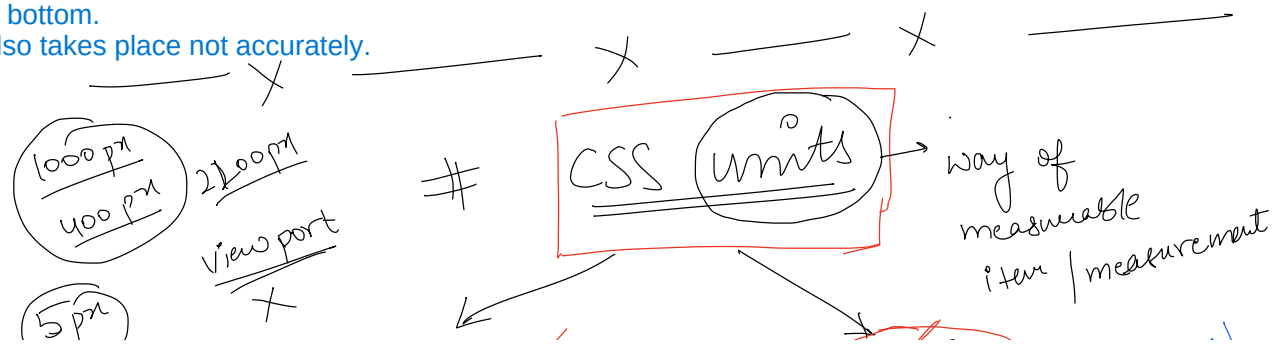


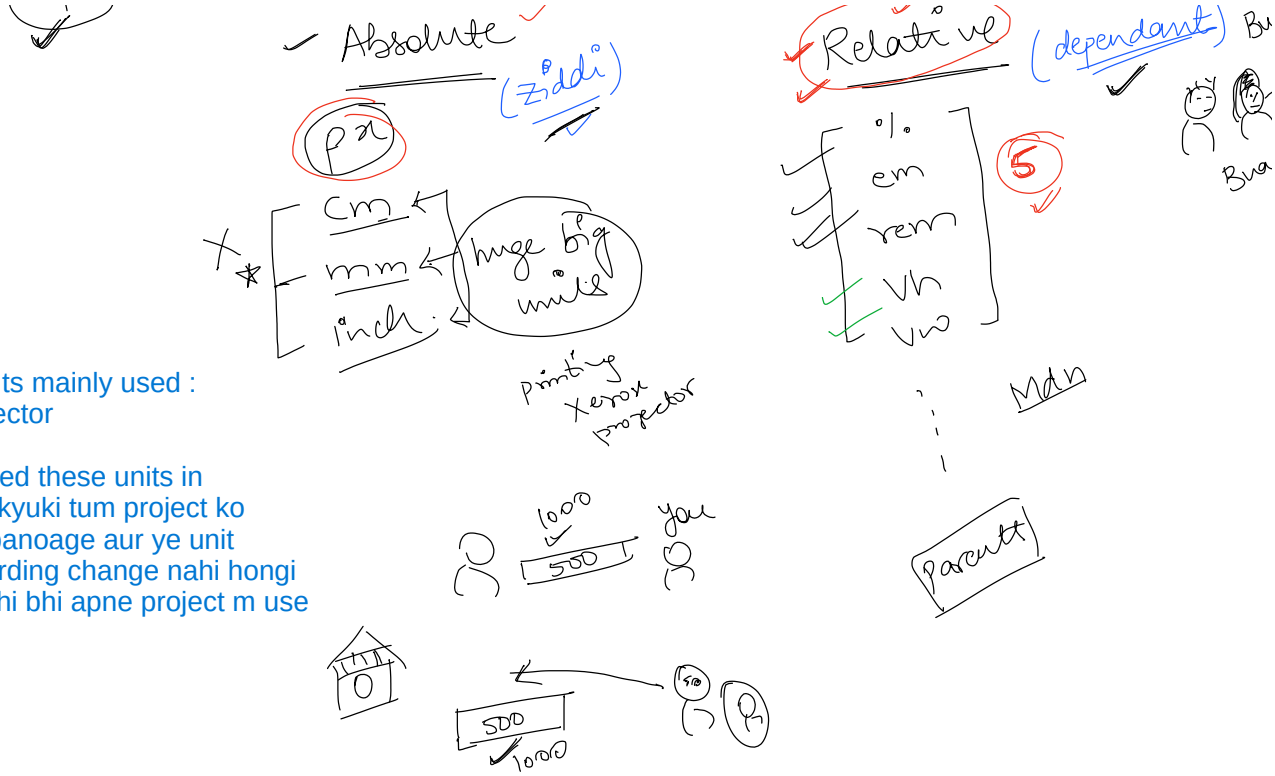




Box-model also works for inline element but not works accurately
1. we can not set height and width the inline element
2. we can set border for inline element.
3. margin occur only from left and right side not from top and bottom.
4. padding also takes place not accurately.

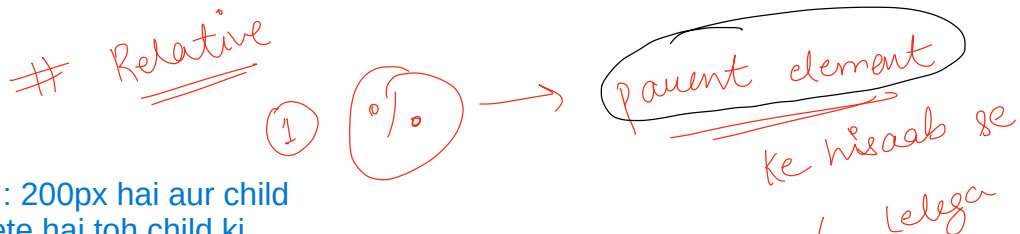
Inline same behave ✗





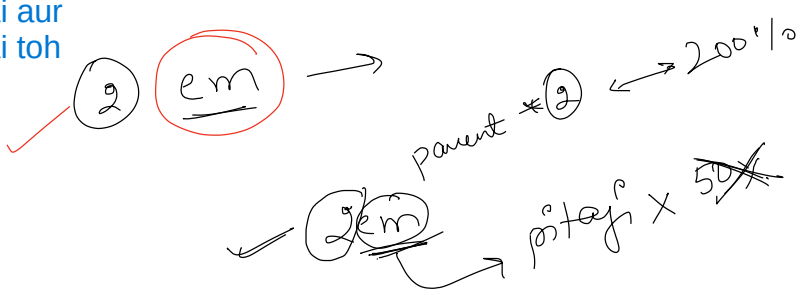
Absolute Units mainly used :
Printer, Projector

Try not to used these units in your project kyuki tum project ko responsive banoage aur ye unit size ke according change nahi hongi toh inhe kabhi bhi apne project m use mat karna.

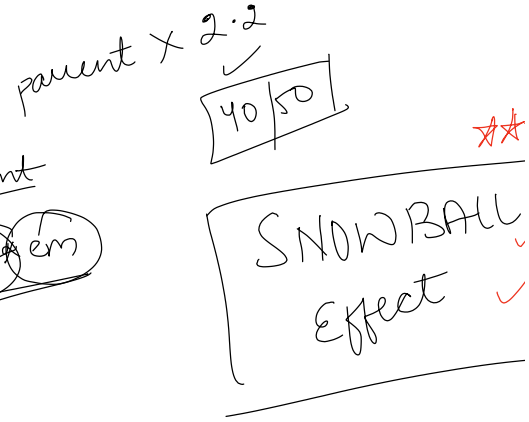


Agar parent ki width : 200px hai aur child ki width hum 50% dete hai toh child ki width 100px.

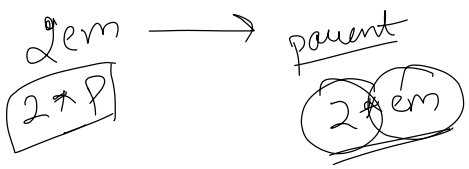
Agar parent ki font-size : 200px hai aur child ki font-size hum 40% dete hai toh child ka font-size 80px.



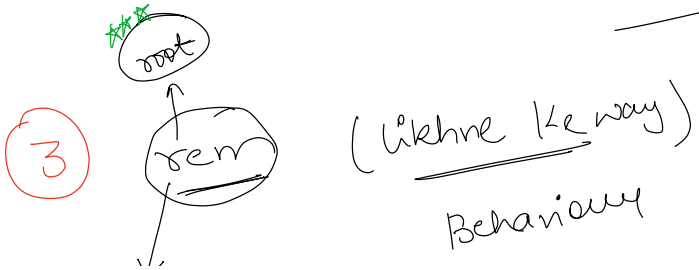
no. of times of its parent
2em => pitaji ke double

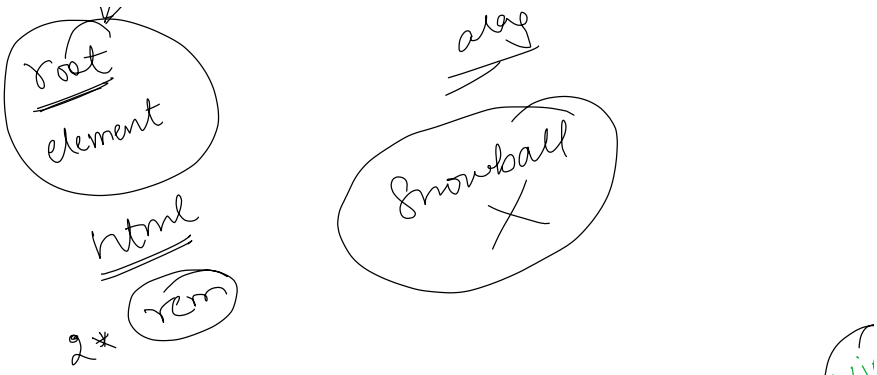


font-size inherit hota hai from parent to child.

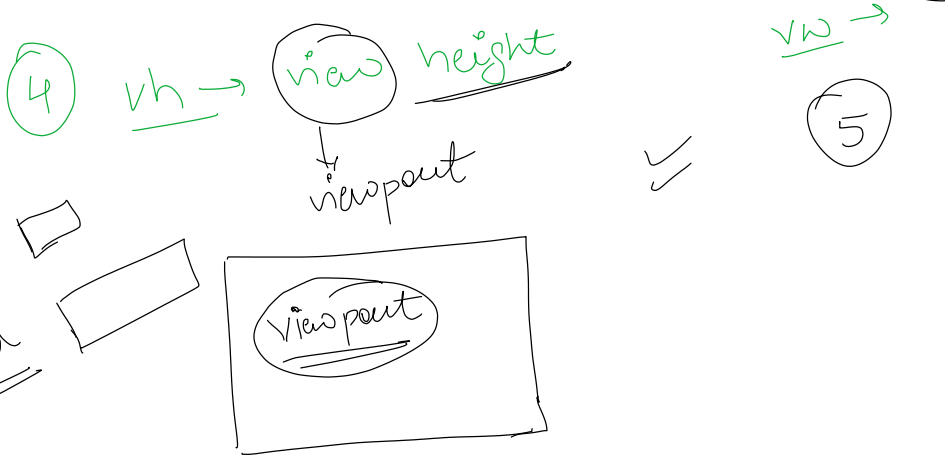


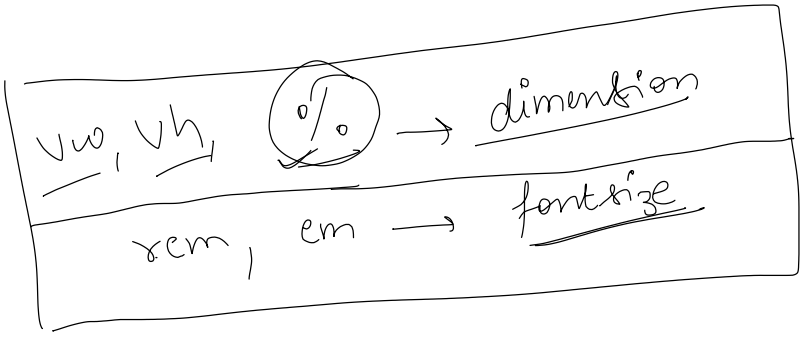
snowball effect occur due to em as child inherit property from parent

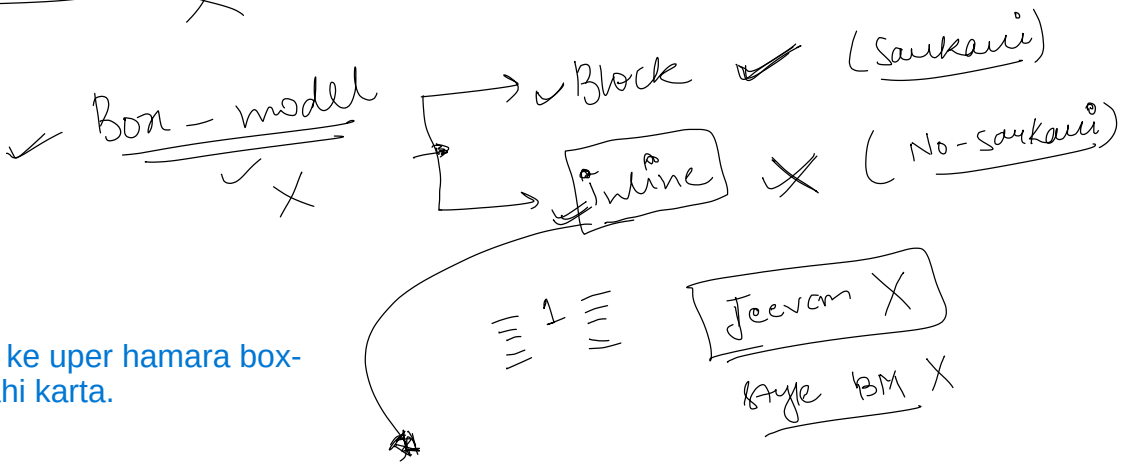




height : 20vh means 20 % of your browser viewport.







inline element ke uper hamara box-model kam nahi karta.
