max-width => jyada se jyada itni width le sakta hai agar itni width nahi hai toh apne hisaab se adjust kar lega khudko.

min-width and max-width

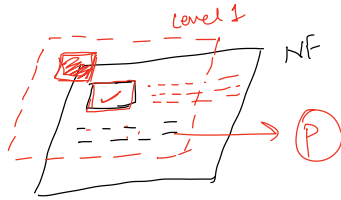

clear and float are also helpful in changinh the normal flow or layout

Normal-flow Layout change (responsive)

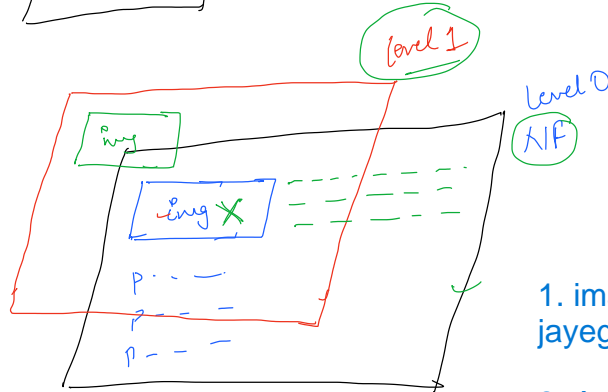

INPUT → ✓ - / - - ✓ → ✓

- display
- position
- clear & float

float → element Normal flow bahar nikalne

~~img~~

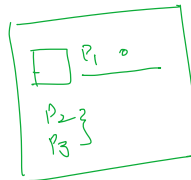

1. image normal flow se bahar aa jayegi aur ek level upar chali jayegi.

2. Aur image apni jagah nahi chodti aur sare paragraph ko lagega ki abb same level pr uske upar koi element nahi hai toh woh image ke baad se apne aap ko align kar leta hai kyuki usse lagta hai ki ab viewport image ke baad se start ho raha hai.

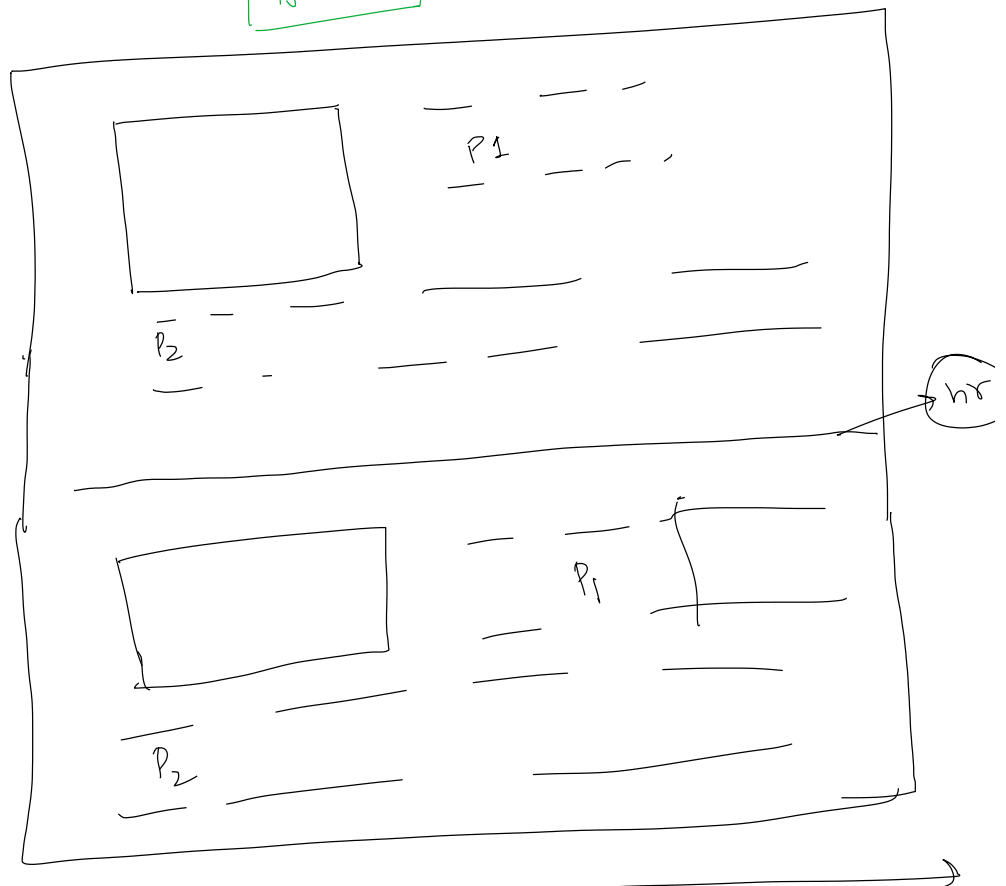

float

clear

float : left => upar ke level pr le jake left side m dikhana.

float : right => upar ke level pr le jake right side m dikhana
